

Reduce Energy Costs, Increase Security and Improve Interior Design With the latest in Window Film

Energy Saving: Achieve **LEED** Credits with Energy-Saving Window Film with new to the world technology. This virtual clear film provides optimum natural daylight intended from a clear window without changing the image or design.

Find out how to increase public safety from flying glass shards, make forced and unwanted entry through glass more difficult.

See how combining far Eastern design traditions with 21st century technology can offer innovative new ways to manage space. At a fraction of the cost of etched-glass, the decorative films are perfectly suited for interior glass partitions or the inside surface of windows.

Learn about product variations in Architectural Finishes to find perfect substitute for, or compliment to, more expensive natural and synthetic finishes. These include over 600 unique design and pattern options in 21 categories that include wood grain, metallic, carbon, leather, stucco, granite, and many more.

Our presenter will be Troy Vlahos, who is a solar and security film specialist for Energy Products Distribution (EPD), the exclusive distributor of 3M Window Film Products in the Northeast United States. He is responsible for business development with government & commercial facilities, working closely with facility managers, architects, engineers, and interior designers.
